Table 1 on the following page summarizes the supplied font families, series, shapes and encodings, whereas table 2 on page 4 lists the assigned Karl Berry's names for the fonts. Be aware that, although there is support for the fonts in various encodings, there are a LARGE number of empty slots on them. Finally, table 3 on page 5 lists the supplied commands to change to a given font. These commands are accesible after loading the package (`\usepackage{emerald}`).

Note that the fonts, although free, have some limitations on their redistribution. The details can be found on the accompanying .TXT files.

*PookieT is a monospaced version of Pookie
